IaaS Services

Fermorite Infrastructure As A Service (IaaS) is a flexible, scalable, and most importantly, reliable Virtual Hosting Service that leverages on a best-in-class architecture and technology.

Fermorite's Virtual Hosting solutions builds on rapidly advancing virtualization technology to bring organizations real economic and operational benefits. It allows for precise and dynamic allocation of computing resources when and where they're needed, thanks to it proven Utility Computing platform, massive and diverse network connectivity and top-tier data center.

IaaS platforms are highly scalable, meaning that they can be adjusted to your current requirements and budgets.

Fermorite's IaaS provisioning model offers a dedicated pool of computing resources (CPU, memory, network, security and storage), called Customer Cloud, featuring for each customer a logical separation of computing, environments (network, operation system, data layers, etc), through advanced virtualization technology.

Top benefits of Fermorite IaaS

RELIABILITY

IaaS has no single point of failure. Even if any one component of the hardware resources fails, the service will usually still remain available.

ENHANCED SECURITY

With the appropriate service agreement, a Fermorite can offer better security for your applications and data than the security you would attain in house.

EFFICIENCY

IaaS resources are regularly available to businesses when they need them. As a result, enterprises reduce delays when expanding infrastructure and, alternatively, don't waste resources by overbuilding capacity.

SCALABILITY & PERFORMANCE

One of the biggest advantages of IaaS in cloud computing is the capability to scale the resources up and down rapidly according to the needs of the enterprise.

COST OPTIMIZATION

IaaS eliminates the cost of configuring and managing a physical datacenter, which makes it a cost-effective choice for migrating to the cloud. Fermorite's IaaS services maximize economy of scale and offer competitive pricing packages as compared to major public cloud providers

BOOSTS PRODUCTIVITY

Because the cloud provider is responsible for setting up and maintaining the underlying physical infrastructure, enterprise IT departments save time and money and can redirect resources to more strategic activities.

IaaS Benefits

The Fermorite IaaS service offers the following major benefits to end-users:

- Scalability
- Cost control
- Technical support
- No hardware costs - Pay as you use
- Zero maintenance needed
- Data security and privacy
- Access from any location and any device.
- Always up-to-date

IaaS Overview

All Cloud Solutions are based on a common infrastructure, which was built with the latest technology to maximize customer's experience with particular focus on Security, Availability and Performance of the service platform. The following services are available:

- Storage
- Cores
- Network Services
- Operating Systems
- Security Services
- Management Services
